

BUSINESS ADVISOR

A BETTER WAY TO LOOK AT YOUR BUSINESS

Today's business solutions store a myriad of data for analysis and decision support. But if you don't have a simple, convenient tool for organizing and presenting that data in a meaningful way, analysis can be tedious, time-consuming or skipped altogether.

What if your system presented you with a "report card" of your business performance? What if you could analyze the impact that different decisions might have on your business? Would you like to know how your business performance compares to industry averages? Business Advisor™ is an executive information tool that does all this and more. It allows you to monitor key areas of your business and alerts you to potential problems — before they become real issues. More importantly, it gives you tools to accurately assess and correct problems.

Business Advisor modules offer alerts, analysis, goal tracking, viewers and business summary modules. The unique report card feature helps you view your business' performance compared to your goals. In addition, Business Advisor allows you to compare financial asset and performance ratios, and compares your performance to industry averages based on the NRHA™ and NLBMDA™ "Cost of Doing Business" studies. "What if" analysis allows you to review the impact different decisions might have on your business.

"Business Advisor not only saves us time with our everyday tasks, it also allows us to complete time-consuming inventory and AR analysis we've never found time for in the past!"
